Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

the close references for the current invention are Ruest et al (U.S. 4,524,077) , Grendel et al (U.S. 5,498,790) , and Kawabe et al (U.S. 5,763,652).

Ruest et al teach the process of preparing 2-hydroxy-4-methylthiobutyric acid (HMBA) in which 2-hydroxy-4-methylthiobutyronitrile (HMBN) is hydrolyzed with sulfuric acid to produce an aqueous hydrolyzate containing HMBA and some amide , which is further treated with methyl ethyl ketone, methyl isobutyl ketone in a liquid-liquid extraction system to produce an extract containing HMBA, thereby recovering the HMBA . Grendel et al teach the process of regenerating a sulfuric acid to be used for hydrolysis of HMBN in the preparation of HMBA. Furthermore, Kawabe et al does teach the process of producing 2-hydroxy-4-methylthiobutyric acid (HMBA) from a starting material of 2-hydroxy-4-methylthiobutyronitrile (HMBN) in various steps of : hydration, hydrolysis, a recycling of ammonia, and electro dialysis .

However, the instant invention differs from the prior art in that none of the cited references teach the claimed method wherein neutralized hydrolysate is not separated into an aqueous phase and an organic phase before the extraction step. In addition, unless all limitations of the claims are met, there is no prior art rejection. See In re Zurko 59 USPQ 2d 1690 (Fed Cir. 1991) and In re Lee, 61 USPQ 1430 (Fed Cir. 1991). In the industrial process, the aforementioned process is important.

Therefore, applicants' claimed subject matter would not have been obvious to the person with an ordinary skill in the art.
